

BEKTUR UKUEV

DevOps Engineer / Platform Engineer

(650) 608-0701 • bektur.uk7@gmail.com • Chicago, IL • [linkedin.com/in/bektur7](https://www.linkedin.com/in/bektur7)

SUMMARY

Built the deployment and infrastructure platform behind 30+ microservices at Pinterest — self-service CI/CD, GitOps-driven clusters, and unified observability — enabling 6 engineering teams to ship to production without DevOps involvement. Reduced project compute costs by 25%, cut release cycles from weeks to days and hours, and drove mean time to detection from 15 minutes to under 3. CKA, CKAD, and Terraform Associate certified.

CORE SKILLS

Cloud & Infrastructure: AWS (Lambda, API Gateway, EC2, Auto Scaling Groups, SQS, SNS, VPC, NLB, S3, ECR, ALB, CloudFront, Route53, RDS, DocumentDB) • Azure • GCP

Containers & Platform: Kubernetes • Amazon EKS • Docker • Helm • Argo CD • FluxCD • Karpenter • Rancher

Infrastructure as Code & CI/CD: Terraform • GitHub Actions • GitLab CI • Jenkins • GitOps • Ansible

Observability & Monitoring: Prometheus • Grafana • Datadog • CloudWatch • CloudTrail • Elasticsearch • Fluentd • Kibana

Databases & Messaging: MySQL • PostgreSQL • MongoDB • Amazon RDS • DocumentDB • Kafka • SLA/SLO/SLI

Security & Networking: IAM • KMS • AWS Shield • Secrets Manager • ACM • TCP/IP • VPN

Languages & Systems: Java • Python • Linux (Ubuntu, Alpine, Amazon Linux) • Bash/Shell Scripting

AI Tools: GitHub Copilot • Claude (Anthropic) • ChatGPT (OpenAI)

Project Management: JIRA • Confluence • Trello • Agile/Scrum

EXPERIENCE

DevOps / Platform Engineer | Pinterest

Chicago, IL | Jul 2023 – Present

- Own a multi-cluster EKS platform at Pinterest serving 30+ microservices for 6 engineering teams — with self-service tooling that lets developers ship independently.
- Built CI/CD pipelines in GitHub Actions for 30+ microservices with environment promotion gates, cutting release cycles from weeks to days and hours.
- Replaced static EKS node groups with Karpenter for workload-aware autoscaling and spot instance support — reducing compute costs by ~25% through right-sizing and dynamic provisioning.
- Implemented GitOps with ArgoCD across all EKS clusters — eliminating manual deployment workflows and ensuring production configs stay in sync with version control.
- Migrated all EKS clusters from self-managed ingress-nginx to AWS-managed load Balancer Controller — eliminating a maintenance burden and simplifying TLS and networking for every platform service.
- Built a unified observability stack (Prometheus, Grafana, Alertmanager) across 3 EKS clusters — with SLO dashboards and multi-cluster alerting that reduced mean time to detection from 15 minutes to under 3.

Cloud Engineer | IDEXX

Chicago, IL | Apr 2021 – Mar 2023

- Provisioned AWS infrastructure using Terraform — deploying ALBs, Auto Scaling Groups, and hub-and-spoke VPC architecture, reducing annual unplanned downtime from 10 hours to under 3.
- Migrated CI/CD from Jenkins to GitHub Actions across 12 services — standardizing deployment workflows and cutting pipeline maintenance effort by ~30%.
- Converted a monolithic document processing service into a serverless architecture using AWS API Gateway, Lambda, and SQS — resolving scaling bottlenecks and improving throughput for document upload and processing workflows.
- Automated server provisioning for 150 Ubuntu instances using Terraform, standardizing AMI builds and reducing deployment time by 40%.
- Managed multi-cloud Terraform configurations, with direct hands-on experience in AWS, and exposure to GCP and Azure.

CERTIFICATIONS

✓ CKA: Certified Kubernetes Administrator	2026
✓ CKAD: Certified Kubernetes Application Developer	2025
✓ HashiCorp Certified: Terraform Associate (003)	2026

EDUCATION

Kyrgyz National University — Bachelor of Law

2020
